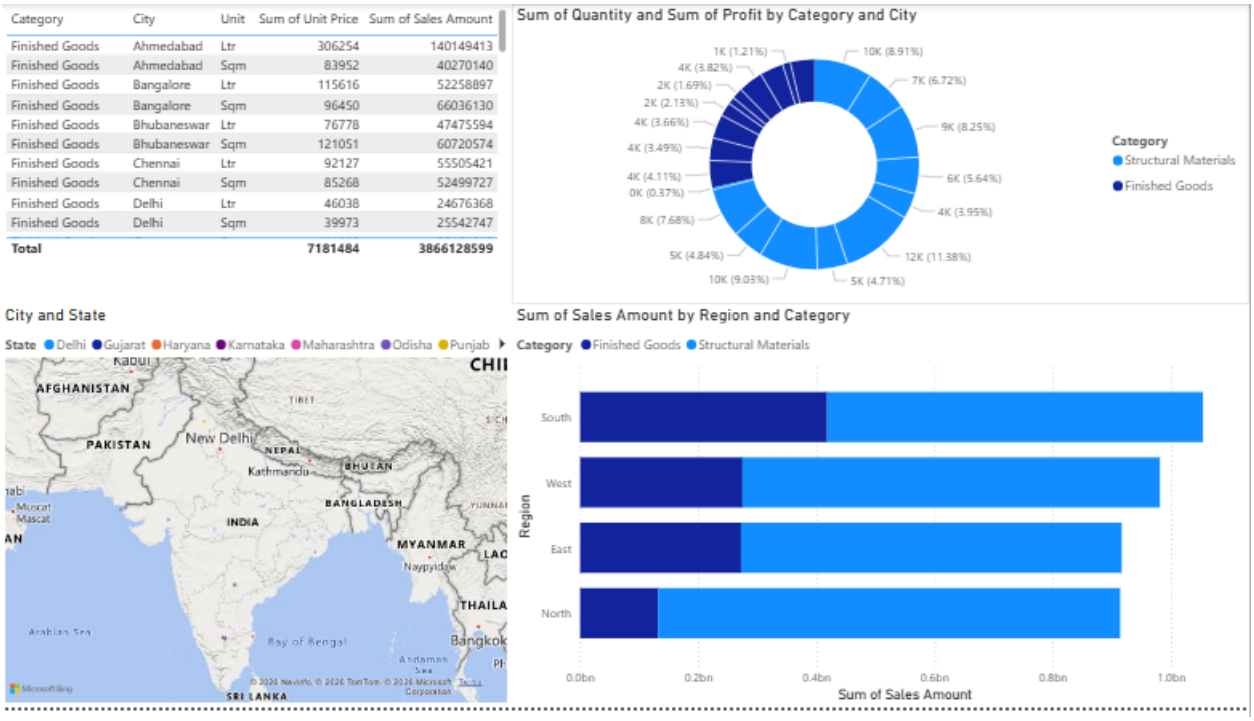
Task 2



Category	City	Unit	Sum of Unit Price	Sum of Sales Amount
Finished Goods	Ahmedabad	Ltr	306254	140149413
Finished Goods	Ahmedabad	Sqm	83952	40270140
Finished Goods	Bangalore	Ltr	115616	52258897
Finished Goods	Bangalore	Sqm	96450	66036130
Finished Goods	Bhubaneswar	Ltr	76778	47475594
Finished Goods	Bhubaneswar	Sqm	121051	60720574
Finished Goods	Chennai	Ltr	92127	55505421
Finished Goods	Chennai	Sqm	85268	52499727
Finished Goods	Delhi	Ltr	46038	24676368
Finished Goods	Delhi	Sqm	39973	25542747
Total			**7181484**	**3866128599**

Figure 2.1 Construction material Sales Dashboard that integrates financial data, inventory units, and geographical distribution to create a "one-stop shop" for performance analysis.

2. Construction material Sales Dashboard that integrates financial data, inventory units, and geographical distribution to create a "one-stop shop" for performance analysis.

This dashboard provides a comprehensive look at sales performance and operational metrics across various Indian cities and regions.

Here is a breakdown of how these different datasets are integrated:

2.1. Granular Performance (Top-Left Table) : This section bridges the gap between logistics and finance. It breaks down data by specific categories (Finished Goods), cities (Ahmedabad, Bangalore, etc.), and their measurement units (Liters vs. Square Meters).

- Key Integration: It links Unit Price with Total Sales Amount, allowing you to see which specific city-unit combination is driving the most revenue (e.g., Ahmedabad is a major contributor).

2.2. Product Mix & Volume (Top-Right Donut Chart): This chart integrates Sum of Quantity and Sum of Profit categorized by product type: Structural Materials and Finished Goods.

- Insights: The varying shades of blue represent different cities or product sub-types. It visualizes how much of the total "pie" each segment occupies, helping identify which

products are the most profitable versus which ones simply move the most volume.

2.3. Geographical Reach (Bottom-Left Map) :This is the Spatial Dataset. It plots the data points across a map of India.

- Integration Role: It provides context to the numbers. By seeing the concentration of points (Delhi, Chennai, Bhubaneswar), stakeholders can quickly identify the physical footprint of the business and regional market density.

2.4. Regional Comparison (Bottom-Right Bar Chart): This integrates Total Sales Amount with Macro-Regions (South, West, East, North) and Product Categories.

- Key Observations: The South region is currently leading in total sales.
- In every region, Structural Materials (light blue) significantly outperform Finished Goods (dark blue) in terms of sales volume.
- This is the high-level summary that allows executives to compare regional health at a glance.

2.5.Summary of the Integration

The dashboard effectively moves from Macro to Micro:

1. Macro: The Bar Chart shows which part of the country is winning.

2. Meso: The Map shows exactly where the physical operations are located.

3. Micro: The Table provides the exact currency and unit values for auditing.

4. Efficiency: The Donut Chart helps determine if the volume of goods sold is actually translating into the desired profit margins.
